## Question 1

Correct

Mark 1.00 out of 1.00

A person needs to eat burgers. Each burger contains a count of calorie. After eating the burger, the person needs to run a distance to burn out his calories.

If he has eaten  $i$  burgers with  $c$  calories each, then he has to run at least  $3^i * c$  kilometers to burn out the calories. For example, if he ate 3

burgers with the count of calorie in the order: [1, 3, 2], the kilometers he needs to run are  $(3^0 * 1) + (3^1 * 3) + (3^2 * 2) = 1 + 9 + 18 = 28$ .

But this is not the minimum, so need to try out other orders of consumption and choose the minimum value. Determine the minimum distance

he needs to run. Note: He can eat burger in any order and use an efficient sorting algorithm. Apply greedy approach to solve the problem.

**Input Format**

First Line contains the number of burgers

Second line contains calories of each burger which is  $n$  space-separated integers

**Output Format**

Print: Minimum number of kilometers needed to run to burn out the calories

**Sample Input**

```
3
5 10 7
```

**Sample Output**

```
76
```

**For example:**

| Test        | Input      | Result |
|-------------|------------|--------|
| Test Case 1 | 3<br>1 3 2 | 18     |

**Answer:** (penalty regime: 0 %)

```

1 #include <stdio.h>
2 #include <stdlib.h>
3 #include <math.h>
4 int comp(const void*A, const void *B){
5     return (*(int*)B)-(*(int*)A);
6 }
7 int main(){
8     int n,km=0;
9     scanf("%d", &n);
10    int cal[n];
11    for(int i=0; i<n; i++){
12        scanf("%d", &cal[i]);
13    }
14    qsort(cal,n,sizeof(int),comp);
15    for(int i=0; i<n; i++){
16        km += (pow(n,i)*cal[i]);
17    }
18    printf("%d",km);
19    return 0;
20 }
21 }
```

|   | Test        | Input      | Expected | Got |   |
|---|-------------|------------|----------|-----|---|
| ✓ | Test Case 1 | 3<br>1 3 2 | 18       | 18  | ✓ |

|   | Test        | Input        | Expected | Got |   |
|---|-------------|--------------|----------|-----|---|
| ✓ | Test Case 2 | 4<br>7 4 9 6 | 389      | 389 | ✓ |
| ✓ | Test Case 3 | 3<br>5 10 7  | 76       | 76  | ✓ |

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
